**Neutrik strongly recommends to keep the devices and the app up-to-date!**

Since App version 2.0 and FW version 2.0 every FW update will be communicated to users via the app. The user will be informed by the app store / play store if there is a new app version available. If the user downloads the latest app but uses an old firmware on the device there will be a message in the app with a recommendation to update the devices to make use of all the new features in the app.
