1. Push bushing and cover onto cable

2. Cable preparation

3. Insert the prepared cable into the connector

4. Soldering
   Solder the inner leads to the solder cups. Make sure that the central cup is properly covered with solder thus securing the threaded joint between tip and cup.

5. Hex-Crimping
   To connect the ground and for proper cable retention: crimp the rear part of the connector with the NEUTRIK Crimp tool.

6. Move forward bushing and cover as far as easily possible.

   Recommendation: Check electrical connection before final assembly.

7. Final assembly:
   Insert into the tool - press together.

Assembly tool:
The HX-TT-1 consists of a crimp tool and a press tool für NP3TT-1-².
